

PUBLIC NOTICE

The United States Consumer Product Safety Commission has issued a warning pertaining to certain water faucets distributed by Amazon.com. These faucets have dangerous high levels of lead and consumers should stop using them immediately.

Detailed information can be found at the US Consumer Product Safety Commissions website, www.CPSC.gov and selecting Recalls and Safety Education Number 25-269. The District samples for lead in accordance with the Colorado Department of Health and Environment (CDPHE). The results from the sampling can be found in the Consumer Confidence Report on the District's website at www.wwsdonline.com.

WASHINGTON, D.C. – The U.S. Consumer Product Safety Commission (CPSC) is warning consumers to stop using certain bathroom and kitchen faucets sold on Amazon.com that can leach lead into drinking water. Lead ingestion can cause harmful neurological effects on infants, young children, and pregnant women, including attention-related behavioral problems, decreased cognitive performance and lower IQ. CPSC advises to stop using and dispose of these faucets immediately.

These warnings follow a CPSC enforcement sweep targeting dangerous faucets manufactured in China. CPSC issued a public health and safety finding to expedite public warnings about these faucets because individuals may be in danger from these product hazards.

If consumers need to continue to use any of the above listed faucets until they can be replaced, make sure to run the water 15 seconds before consuming.
